DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 2-18, and 20-30, drawn to a composition comprising a T7 ligand attached to a compound, wherein the T7 ligand is attached to the compound through a covalent bond, classified in class 530, subclass 402.
 - II. Claims 2-17, 19-30, drawn to a composition comprising a T7 ligand attached to a compound, wherein the T7 ligand is attached to the compound through a non-covalent bond, classified in class 530, subclass 402.
- 2. Claim 1 link(s) inventions I, and II. The restriction requirement between the linked inventions is subject to the nonallowance of the linking claim(s), claims 1. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.
- 3. This application contains claims directed to the following patentably distinct species of the claimed invention: A composition comprising a T7 ligand attached to a compound, wherein

Application/Control Number: 10/633,808

Art Unit: 1653

the compound claimed consists of either a interferon, complex, a liposome, a polyplex, a lipopolyplex, a polynucleotide, or an RNA function inhibitor. Applicant must also elect a species for the T7 ligand to be searched from the species: A T7 ligand comprises SEQ ID NO: 1, T7 ligand consists of a thiol, T7 ligand consists of biotin, T7 ligand consists of streptavidin, T7 ligand consists of a T7 phage, T7 ligand consists of a T7 p17 protein, T7 ligand consists of a T7 p17 derived peptide, T7 ligand consists of T7 ligand-cysteine-PDP-streptavidin, or T7 ligand consists of T7-ligand-PEG-biotin.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 2, and 29 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the

Application/Control Number: 10/633,808

Art Unit: 1653

examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

The inventions are distinct, each from the other because of the following reasons:

- 4. Inventions I, and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to composition claims that are composed of different structures, a compound bound to a T7 ligand through a covalent bond and a compound bound to a T7 ligand through a non-covalent interaction.
- 5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
